

What does it weigh?

School-age activity

<https://nurturestore.co.uk/what-does-it-weigh-kids-experiment>

This activity boosts school agers' brain as they predict and experiment with weight. It encourages children to take a little risk and give their own opinion as well as increases their self-esteem as they become more competent in weighing objects and making predictions. Provide school agers with the scale and the prompt.

What is it?	What does it weigh?
1. hsup	0
2. Earlele	1.65
3. muc	2
4. tpa	1.65
5. sbsus	2

The Prompt:

1. Find 10 things you would like to weigh
2. I think the heaviest thing is the _____
3. I think the lightest thing is the _____
4. I think the _____ and the _____ might weigh the same.

Encourage children to think about the weight of items before they place an item on the scale. This activity involves a little bit of writing; however, the main focus of this activity is weighing objects. So, if your school-agers are the beginners in writing, have them draw pictures instead.
